

COMP 408/508 - ASSIGNMENT 2

REPORT

Özgür Taylan Özcan

I tried to follow the instructions step by step for each part. I implemented all of the needed parts. Step 3 (Feature matching) is working well, without errors. However, I get bad results for steps 2 (feature description) and 4 (ransac). I get no runtime errors and I could not figure out why the tests fail.

The warnings that I receive:

- For feature description, when I run "EvaluateSIFTDescriptor.m", I get the following message:

Your error with the reference solution...

204.4416

There is something wrong.

- For ransac, when I run "TransformationTester.m", I get the following message:

No RANSAC fit was found.
